Summary

Engineering graduate (IIITDM) and PGPMCI candidate (IIM Visakhapatnam) with experience shipping AI/ML features from requirements through production, partnering with stakeholders on AI candidate matching and success metrics at Meraqui. Self-initiated teardowns (Comet, KreditBee, PhonePe) and an interactive PM Decision Simulator focus on funnel friction, trade-offs and validation metrics.

Education

Indian Institute of Management Visakhapatnam — *Post-Graduate Program in Management (PGPMCI)* 2025 – 2027
IIITDM Kurnool — *B.Tech, Computer Science and Engineering* 2022 – 2026

Experience

Data Science Intern — Meraqui Ventures Pvt. Ltd. (karam.ai) Apr 2025 – Jul 2025
Pune, India

- Owned the requirements-to-shipping loop for an AI-driven candidate-matching feature; partnered with stakeholders to define success metrics and improved matching precision by **15%** through feature engineering and LLM fine-tuning.
- Drove integration of the AI platform with client ERP systems via REST APIs, cutting manual data entry by **15%** and improving customer-facing workflow adoption.
- Reduced downstream data inconsistencies by **12–15%** by specifying and building schema-validated ETL pipelines, and defined test suites and API contracts with engineering to de-risk production AI deployments.

Development Engineering Intern — Treacle Technologies (Incubated at IIT Kanpur) Jun 2024 – Aug 2024
Kanpur, India

- Specified and built monitoring dashboards (Grafana, Elasticsearch) that cut incident detection time by **40%**, translating an operational pain point into a measurable reliability metric.
- Scaled real-time data pipelines across distributed systems to process **100k+ logs/day**.
- Automated log preprocessing, removing **80%** of manual operational effort.

Product Case Studies

Comet (E-commerce AI Search) — Teardown & Friction Analysis 2026

- Reverse-engineered Comet's AI "Finder" discovery flow to diagnose drop-off between recommendation generation and PDP conversion.
- Proposed a context-aware conversational memory solution to carry size/fit parameters across sessions and reduce cart abandonment; defined "Finder-assisted add-to-cart rate" as the validation metric.

KreditBee & PhonePe Lending — Same Category, Two Failure Modes 2026

- Diagnosed distinct friction points in two live lending funnels: a document-upload bottleneck (KreditBee) vs. a marketplace trust-continuity break (PhonePe).
- Proposed conversational AI-agent solutions (real-time document feedback, cross-partner context carry-over), each paired with primary/secondary metrics (e.g., first-session KYC completion rate).

Independent Research

Reliability Framework for Quantized Vision-Language Models 2026

- Identified a real-world product risk, hallucination in cost-optimized (quantized) models on edge/on-device hardware, and scoped an original technical solution.
- Designed a non-parametric density-drift detector and a cost-aware two-tier inference cascade (GPU + CPU), trading off latency, cost and reliability, the same triangle product teams navigate when shipping AI features. Revised through external peer review ahead of IEEE journal submission.

Skills & Coursework

Product: Problem Framing, Product Discovery, Success Metrics, Funnel & Friction Analysis, Prioritization, PRDs, Experimentation Fundamentals, Stakeholder Management
AI/LLM: Prompt Design & Evaluation, RAG, Model Selection, Cost/Latency/Accuracy Trade-offs, Hallucination & Reliability Assessment
Data: SQL, Precision, Recall@K, NDCG, Latency Benchmarking, Ragas
Technical: Figma, Python, REST APIs, FastAPI, Docker, PostgreSQL, LLMs, LangChain, FAISS
Coursework: Advanced Analytics, Platform & Ecosystem Strategy, Automation for Managers, Project Management, International Business, Entrepreneurial Finance

Certifications & Achievements

- Oracle Cloud Infrastructure 2024 Generative AI Certified — Score: 92.5%
- 2nd place, GDG Hackathon (AI/ML), Mar 2025 | 2nd place, DataWorks Hackathon (LLM Apps), Apr 2025
