Summary

Computer Science graduate (B.Tech, 2026) with hands-on experience in LLM evaluation (DeepEval, Ragas, LangSmith), hallucination assessment and Python test automation.

Experience

Data Science Intern Apr 2025 – Jul 2025
Meraqui Ventures Pvt. Ltd. (karam.ai) *Pune, India*

- Designed API adapters, validation pipelines, and test suites to support reliable AI system deployment.
- Built ETL pipelines with schema validation and data-quality checks, reducing data inconsistencies by 12–15%.
- Improved an LLM candidate-matching system via feature engineering and fine-tuning, raising precision by 15%.
- Integrated an AI-driven platform with ERP systems through REST APIs, reducing manual data entry by 15%.

Development Engineering Intern Jun 2024 – Aug 2024
Treacle Technologies (Incubated at IIT Kanpur) *Kanpur, India*

- Built Grafana and Elasticsearch monitoring dashboards, reducing incident detection time by 40%.
- Engineered real-time data pipelines processing 100K+ logs/day with custom evaluation metrics.
- Automated data-preprocessing pipelines (80% less manual effort); deployed AI workflows with Docker.

Research Intern Jan 2026 – Jul 2026
Indian Institute of Information Technology Design and Manufacturing Kurnool *Kurnool, India*

- "Nyaya Shastra for Computer Science Engineers": applied classical Nyaya reasoning to computer science concepts.

Projects

Enterprise RAG System with Evaluation | *Python, LangChain, FAISS, Ollama, Ragas, Docker* Feb 2025

- Evaluated retrieval and answer quality with Ragas, Recall@K, NDCG, Precision and latency; used prompt engineering to reduce hallucinations.
- Built a RAG pipeline with LangChain, FAISS and Ollama using hybrid retrieval, optimized chunking and semantic search.
- Containerized the system with Docker and integrated it through REST APIs for reproducible execution.

Active Conformal Control: Hardware-Aware Safety for Quantized Vision-Language Models 2026

- Built a hallucination-mitigation framework using density-chasm detection and a density-ratio estimator (ppDRE) to detect latent drift.
- Designed a GPU-student/CPU-teacher inference cascade with conformal prediction thresholds for reliable, low-latency inference.

Technical Skills

LLM Evaluation: DeepEval, Ragas, LangSmith, RAG evaluation, hallucination assessment, Recall@K, NDCG
Test Automation: Playwright, Selenium, Appium (Basic), Pytest (Basic), test suites, schema validation
API Testing: REST APIs, API validation, FastAPI, Postman (Basic)
Programming: Python, OOP, SQL, C++, Java
CI/CD & Cloud: Git, GitHub Actions, CI/CD pipelines, Docker, AWS (Basic)
AI/ML & Data: LLMs, NLP, fine-tuning, prompt engineering, PyTorch, TensorFlow, Scikit-learn, ETL, Kafka
Databases & Monitoring: PostgreSQL, MySQL, Grafana, Elasticsearch, Streamlit

Education

Indian Institute of Information Technology Design and Manufacturing Kurnool Kurnool, India
B.Tech in Computer Science | CGPA: 6.07/10 *Nov 2022 – Jul 2026*

Certifications & Achievements

Oracle Cloud Infrastructure 2024 Generative AI Certified – Score: 92.5%

2nd Place – GDG Hackathon (AI/ML Track), Mar 2025; 2nd Place – DataWorks Internal Hackathon (LLM Applications), Apr 2025
